Notes

Assume this layout is outdated. See the following for the latest layout

<https://github.com/colganr/tr-jm-signature/tree/master/Fairfield%20County%20Signature%20Layout%20Ceriatone%20Cassis/Layout>

All resistor values are true to the original amplifier. They are extremely hard to find in carbon film (E96 Series)

Substitute with the closest value available if the original value is not available. Ex. 215k original = 220k Commonly Available

Don't stress about getting exact. Seriously! Your amp will sound great.

All resistors are 1/2w 350v+ carbon film unless specified.

Dark brown bigger resistor = Dale RN65D

Dark brown smaller resistor = Dale RN60
